

FIELD REPORT ON KANTHILANGSO, EAST K. ANGLONG

22nd March, 2021

DEPARTMENT OF GEOGRAPHY
CHARAIBAHU COLLEGE

Introduction

The Department of Geography organised a field study programme at Kanthilangso, East K. Anglong for students in the 4th Semester of Geography (Honours) to fulfill the requirements for the practical paper on March 22, 2021.

Beautiful Kangthilangso Waterfall is a natural landmark in Assam's Karbi Anglong district. It is surrounded by thick forests and undulating hills in a peaceful and beautiful location. It is breathtaking to see the Kangthilangso Waterfall, which falls down a rocky cliff and into a large lake. Both tourists and residents love the peace and beauty of the falls, which draw them to this well-liked attraction.

Objectives

The main objectives of this study are:

1. To investigate into potential tourism opportunities in the study region.
2. To explore the natural wonders in the study area.

Methodology

The primary data source for the report is the information collected during the field visit. The published manual and an internet search provided relevant data. Interviews with locals are also used to acquire hidden information.

Observation and outcomes

1. The students studied and illustrated natural beauty of Kangthilangso Waterfall and its surrounding.
2. Students interrogated the Karbi people about their historical connections to the falls and how they regard it as a holy place.
3. Students asked why the falls are significant to the cultural history of the community and are included in numerous Karbi legends and folklore.
